

# Niagara AX version 3.8u1 Feature Overview

# Release summary

Niagara AX version 3.8u1 demonstrates Tridium's commitment to supporting our final long-term Niagara AX release.

While we highly recommend that all of our customers upgrade to Niagara 4 at their earliest convenience, we realize that the entire array of drivers and applications that were created for Niagara AX may not yet be ported to Niagara 4. For customers who rely on this content and need to stay at version 3.8 for the time being, we have introduced some features in this release that will help them bridge the gap until the upgrade to Niagara 4 becomes feasible.

## NOTE:

As of the release of Niagara AX version 3.8u1, version 3.6 will no longer be supported in accordance with our software support policy.

# Feature overview

Feature	Benefit	Notes
JACE® 8000 support	Improved Niagara AX system performance by taking advantage of the power of the JACE 8000	New JACE 8000 hardware functionality, such as WiFi, is not available when running v3.8u1
Java Web Start 	Bundled Web Start application can display Niagara AX Java Applet UI profiles to mitigate lack of client browser plug-in support	Java Web Start still requires that Java is installed on client computers
Auto-download of Java security policy files	Automatically downloading Java security files to the end-user client computer when logging into the system saves time compared to installing the files manually	User will typically need Admin permissions for client computer to upgrade Java security policy files
Windows 10 support	Niagara AX Supervisor and Workbench now support the latest Windows OS	
Various bug fixes	Improved system usability	See v3.8u1 Release Notes for details when available
