

Niagara Enterprise Security 2.2

Complimentary update

If you're a current Niagara Enterprise Security version 2.2 customer and wish to receive the **complimentary update to version 2.3**, simply log into your platform using your Workbench or security maintenance tool. Once logged in, open the license manager and follow the prompts. Be sure to verify you're licensed for Niagara AX 3.8, and your update will take effect once you restart your station. Please contact support@tridium.com if you have any questions or experience issues during the update.

The best way to reduce risk and stay current is to pair Niagara Enterprise Security with a Software Maintenance Agreement (SMA). After the initial update period, Niagara Enterprise Security will begin following the same SMA program as the one introduced with Niagara 4.
